HARVEY BENNETH DORMIDO LIMBO

Game Developer

Contact Info

Email: limboh27@gmail.com
Phone: 657-236-1890
Website: hlimbo.github.io
Location: Orange County, CA

Skills

Programming Languages

C#, Python, gdscript
JavaScript, Typescript, Java,
C++, C, Golang

Design Patterns

Singleton, Observer, Dependency Injection

Game Engines

Unity, Godot

Unity Knowledge

Cinemachine, Rigidbody, Components, Scripts, TMPro, UI Toolkit, Mirror, C#

Tools

Unity, SDL2, Visual Studio, IntelliJ, Git, JSON, Jira, AWS, Webstorm, Stripe SDK, Spring, JDBC, Docker, React, React Native, Redux, Express, NodeJS, Swagger, Postman, Cypress, Selenium

Database

MySQL, MongoDB, PostgreSQL

Education

University of California, Irvine

- Grad Date: Dec 2017
- Bachelor's of Science Computer Science

Irvine Valley College

- Associate's Degree in Computer Languages

Projects

Definitely Not Bomberman | Game Developer

- An action top-down game where player fox throws bombs to beat enemies.
- Experimented with LLM code generation/brainstorming and some art assets being AI generated.
- Technologies used: Godot 4.4, gdscript.

Breakout PS Vita | Game Developer

- Breakout clone written as a homebrew app on PS Vita.
- Technologies used: C++, SDL2, SDL2 TTF, PS Vita SDK.

Project Ace | Game Developer

- Independently developed an online multiplayer game up to 4 players inspired by card games like Uno.
- Wrote server and client code in C# using Unity and Mirror Networking API.
- Deployed Game Server on a linux machine using Digital Ocean.
- Implemented card drag and drop system using Unity's Event System.

Beat Em' Left - C++ Game Engine | Engine Developer

- Implemented Entity-Component-System (ECS) using C++ and SDL.
- Wrote a Game Controller input system that supports analog stick inputs.
- Wrote custom IMGUI components where UI elements get rendered on screen every frame.

Created Box and Circle Colliders to use in detecting and responding to 2D Collisions.

Work Experience

Amazon | Software Development Engineer II — June 2024 – Oct 2024

- Part of Ring Smart Replies Services Team
- Technologies used: Python, Go (Programming Language), AWS

MEDL Mobile | Software Engineer — Feb 2020 – May 2024

- Developed and maintained web applications using the following technologies:
  - NodeJS, typescript, react, react-beautiful-dnd, react-transition-group, redux, storybookjs, material-ui, tailwindcss, Stripe SDK.
  - Collaborated with the UI/UX team to ensure design specs are met to the highest quality.
- Maintained a Legacy Monolithic ExpressJS backend codebase that contains approximately 90 MySQL tables by providing bugfixes and adding new features/enhancements.

Gamblit Gaming | Software Engineer — Oct 2019 – Dec 2019

- Integrated 3 third-party games such as Into the Dead for Gamblit's TriStation (Gambling Machine) using the Unity Engine in C#.
- Implemented Game UI updates using NGUI and UGUI and based on QA and gambling legal requirements.
- Worked with Team Lead and Java Developers to troubleshoot, diagnose, and provide bug fixes for existing third-party games.

AutoGravity | QA Automation Engineer — Jan 2018 – Oct 2019

- Worked alongside multidisciplinary teams to validate and resolve Jira tickets via REST API and MySQL in an agile environment.
- Created a JavaScript test framework using NodeJS and migrated legacy code. This reduced test automation time from 8 hours to 45 minutes.
- Managed 30+ automated test jobs written in Ruby using RSpec framework through Jenkins and reported microservice integration bugs to backend developers.
- Mentored team members using internal test tools to validate responses received from third party APIs.
